The classic
care bed

Westfalia III - The classic care bed

Advantages

Quality and durability

The "Westfalia III" care bed is sturdily constructed to stand up to the rigours of daily care. High-quality components make this a particularly durable, sturdy and low maintenance care bed that significantly reduces follow-on costs. Occupants are provided with ideal conditions for care. The bed considerably relieves staff in their daily care routine.

Cost-effective

This bed offers exceptional value for money, but not at the expense of the materials or design. The uncompromising use of high-quality materials is a hallmark of the Burmeier philosophy.

24-volt drive system available as an option

By using the 24-volt drive system, the prescribed intervals for leakage current testing are extended to such a degree that leakage current testing is no longer required during or beyond the expected service life of the bed. Please refer to the instruction manual for the length of this period. The first leakage current test has already been conducted by the manufacturer. The 24-volt extra-low voltage saves electricity and enhances the safety of occupants.

Design details

Handset
with selective
locking function

Manually adjustable
lower leg rest

Various wooden headboards
and footboards available:
"Standard" without round posts,
